Nithya Shree V

Product Engineer | Generative AI, RAG & Agentic Systems

Chennai, India | shreenithya.2002@gmail.com | LinkedIn | Github

Professional Summary

Product Engineer with 2+ years of experience progressing from feature delivery to independently owning full-stack and AI-driven systems end-to-end — from stakeholder discussions and solution design through development, deployment, and production monitoring. Built and shipped an AI-driven ERP support automation platform (80% retrieval accuracy, saving 20 hrs/week), a project management platform with auto-scheduling adopted by 20+ departments, and a test case management platform that eliminated manual, Excel-based tracking. 4x award winner recognized for turning ambiguous requirements into measurable software outcomes.

Skills

Languages & Backend: Python, FastAPI, Node.js, REST APIs, Microservices, Event-Driven Architecture
Frontend: React.js, JavaScript, HTML/CSS, State Management, RBAC, Responsive UI Development
AI & LLM: RAG Architecture, LLMs, LangChain, LangGraph, Agentic AI, Prompt Engineering, LLM Evaluation, Azure OpenAI, , Vector Embeddings (Pinecone, Azure AI Search)
Data & Databases: MongoDB, MySQL, PostgreSQL, Redis
Cloud, DevOps & Code Quality: Azure, AWS (EC2, S3), Docker, GitHub Actions, Azure DevOps (CI/CD), SonarQube, ESLint
Integration & Tooling: : Atlassian Forge, API/Data Mapping, Pub/Sub & CDC-based Sync, Mulesoft, Enterprise System Integration, Salesforce

Professional Experience

Hibiz Solutions *Chennai, India*
Product Engineer *Jun 2024 – present*

- Partnered directly with stakeholders to scope ambiguous requirements into a working solution — built and shipped an AI-driven **ERP support automation** platform **(80% retrieval accuracy)**, saving **20 hours/week** for a **30+ person** support team. Took full ownership of **knowledge base design** end-to-end — ERD, ingestion pipelines, backend services, and retrieval-quality tuning — for structured and unstructured enterprise data. Owned deployment and monitoring via Azure DevOps CI/CD and Azure Monitor, staying accountable for production reliability.
- Independently designed and built a full-stack **project management platform** with auto-scheduling and dependency management, driving adoption across **20+ departments for 100+ concurrent projects**.
- Led and mentored a junior engineer while architecting a multi-agent (Agentforce) support system with orchestrated sub-agents for **RMA process**, from design through rollout including customer-data analysis and metadata-generation pipelines feeding RAG storage.
- Collaborated across engineering and business teams to build **event-driven data synchronization channels** (CDC + Pub/Sub) between Salesforce and third-party systems, improving real-time consistency, reducing reliance on scheduled synchronization and improving data consistency across distributed systems.
- Worked closely with stakeholders to identify a manual, error-prone process and deliver an **Atlassian Forge test case management app** in its place— auto-generating Confluence pages and tracking test results and tester comments across **2,000+ test cases** and multiple test cycles in production
- Authored **technical design documents**, **solution delivery documentation**, and **testing documentation** across projects, ensuring clear requirement handoff and cross-team alignment.
- Recognized **4x** with the **Hibiz Honors Award** (Nov 2024, Apr 2025, Jul 2025, Apr 2026) for sustained top-tier delivery and product impact.

AI Study Assistant *Personal Project*

- Built a full-stack RAG study assistant using LangChain, Pinecone, HuggingFace embeddings, Groq inference that converts uploaded material into structured topic overviews.
- Implemented scanned-PDF processing via PyMuPDF and vision LLM capabilities, secured access with Google OAuth 2.0.

Education

Government College of Technology, Coimbatore. *Nov 2020 - Mar 2024*
B.E. Electronics and Communication Engineering, ***CGPA: 8.9***

- Served as the **Joint Secretary** of ECE Association and Y's Service Club of GCT Youth.
